

SPRING BOOT

DEPENDENCY INJECTION:

APPLICATION

```
package com.example.DependencyInjection;

import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;
import org.springframework.context.ApplicationContext;

@SpringBootApplication
public class DependencyInjectuonApplication {

    public static void main(String[] args) {

        ApplicationContext context= SpringApplication.run(DependencyInjectuonApplication.class, args);
        student s = context.getBean(student.class);
        s.writeExam();
    }
}
```

STUDENT

```
package com.example.DependencyInjection;

import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.stereotype.Component;

@Component 2 usages
public class student {
    @Autowired
    private pen pen;

    /* @Autowired
    public void setPen(pen pen){
        this.pen=pen;
    }*/

    /*@Autowired
    public student(pen pen){
        this.pen=pen;
    }*/

    public void writeExam(){ 1 usage
        System.out.println("Student is writing exam");
        pen.write();
    }
}
```

PEN

```
package com.example.DependencyInjection;

import org.springframework.stereotype.Component;

@Component 1 usage
public class pen {
    public void write(){ 1 usage
        System.out.println("Writing with Pen");|
    }
}
```
