

SPRING BOOT

COMPONENT EXAMPLE1:

```
package com.example.Component;

import org.springframework.stereotype.Component;

@Component 2 usages
public class ComponentEg {
    public void show(){ 1 usage
        System.out.println("Component Class Example");
    }
}
```

EXAMPLE 2:

```
package com.example.Component;

import org.springframework.stereotype.Component;

@Component 2 usages
public class ComponentEg2 {
    int age = 10; 1 usage
    String name = "Abi"; 1 usage
    public void display(){ 1 usage
        System.out.println("Name: "+name+" Age: "+age);
    }
}
```

COMPONENT APPLICATION:

```
package com.example.Component;

import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;
import org.springframework.context.ApplicationContext;

@SpringBootApplication
public class ComponentApplication {

    public static void main(String[] args) {
        ApplicationContext context = SpringApplication.run(ComponentApplication.class, args);
        ComponentEg com = context.getBean(ComponentEg.class);
        com.show();

        ComponentEg2 com1 = context.getBean(ComponentEg2.class);
        com1.display();
    }
}
```
